Friday – Numeracy

Estimating

Can you remember what estimating is?
You make a sensible guess about how many of something there is or how far away something is.

Estimate first and then check how close you are.

How many steps will it take you to walk from your bedroom door to your bed?

How many steps are there from the sitting room door to the kitchen door?

How many hands is the length of your sofa?

How many hands is the width of your door?

Can you find any other distances or objects to estimate and measure?

TOPIC Let's build a fort!!

What would you like your fort to be? It could be anything from a fairy castle to an alien spaceship!

Use whatever items you have in your home to create a fantastic fort.

Whilst you're in your fort, can you think of 6 describing words - remember these are called 'adjectives' to describe your fort?
