

Wednesday – Numeracy

Measuring

1. Find 3 books of different sizes.
2. Put the books in order of size from the smallest to the largest.
3. Using a ruler, measure each book in centimetres and write down the measurements, remembering to put cm after the number.

4. Can you find another 3 objects to measure?

TOPIC
What is floating? What is sinking?

Have a look around the house (with adult supervision) and find a few toys or items that you think might float, are they light or are they heavy?

Then have a look around your house for some that might sink, are they heavier or lighter than the items you thought would float?

Now you have your items, it's time to be a scientist and test our ideas!

Place your items one at a time into a sink or bathtub of water!
